

Attention all homeowners considering solar installations on slate roofs! Before you embark on this glorious endeavour, we have a few important points to share. At Livestainable, we value transparency and want to make sure you are well-informed about the potential risks and additional services involved in slate roof installations.

Firstly, we must stress that the risk of broken roof tiles during the installation process is high. Despite our team's utmost dedication to delivering competent workmanship, we cannot be held liable for any tiles that may crack or break during the installation. We want you to have realistic expectations, so please bear this in mind.

However, fear not! In the unfortunate event that you do encounter any broken roof tiles, we are more than happy to offer a repair service, but please note that this will come at an additional cost. Our skilled technicians will swiftly address the issue, ensuring that your slate roof remains flawless and protects your home for years to come.

Furthermore, if you have a particularly steep roof pitch exceeding 45 degrees, or if your roof is not of standard design, we will require a site survey before the installation date. This survey will allow us to evaluate the need for specialized equipment that may be required to complete the installation with utmost precision and safety.

At Livestainable, we believe in delivering top-notch service, but we also want to keep you well-informed and prepared for any unexpected challenges that may arise during your solar panel installation on your slate roof.

Don't let these disclaimers discourage you! Solar Installations on slate roofs offer unparalleled beauty and durability, and with Livestainable, you can enjoy peace of mind knowing that you are in capable hands.
